CloudSort[®] Reusable Smart Containers Debut at Manifest 2024

With a New Vision for the Middle Mile, CloudSort's Reusable Smart Containers are Transforming Legacy Logistics

BELLEVUE, Wash.--(BUSINESS WIRE)-- CloudSort Corporation – an award winning logistics technology company helping organizations unlock the potential of the middle mile – today announced it will debut its proprietary reusable smart containers at this year's Manifest 2024 conference in Las Vegas.

CloudSort's modular containers are designed to improve how users transport goods - reducing consumables spend while improving visibility, security and transportation utilization. CloudSort containers deliver value that enhances customer experience and directly contributes to sustainable shipping.

"At CloudSort, we continually strive to develop the digital and physical tools that enable our clients to improve their proprietary advantage. These containers represent another move forward in that journey," says Derek Szopa, Founder and CEO of CloudSort Corporation. "We offer a simple and transparent subscription model that allows users to align capacity with business needs."

Derek Szopa, Founder and CEO of CloudSort Corporation, has been selected to speak at Manifest 2024 in Las Vegas Nevada on February 6, on a panel highlighting Revolutionary Technology from Middle Mile to Last Mile. To meet the executive team and see their proprietary technology and smart container solutions in action, join us at **Manifest 2024 booth #1303 at Caesar's Forum in Las Vegas from Feb 5 – Feb 7, 2024.**

About CloudSort Corporation

Incorporated in Bellevue, WA in 2019, CloudSort is a technology company that enables organizations to redesign how goods move through the supply chain. Mr. Szopa's pioneering vision for the middle mile drives efficiency, flexibility, and scalability. No other provider offers a standalone, cloud-based sortation software solution that, paired with proprietary smart container solutions, enables organizations to sort smarter, route better, and unlock competitive advantage across the largest link in the supply chain. The future of logistics is agile and unbound.
