

Ventus AI Launches AI Teammate Platform for Logistics

A colleague that communicates, learns, operates, and delivers insights—without API integrations

LAS VEGAS – February 2026 – Ventus AI today unveiled its AI Teammate platform for logistics operations at Manifest 2026. Unlike traditional automation tools that simply execute scripts, Ventus introduces AI teammates that work alongside operations teams—communicating like colleagues, learning company SOPs, operating autonomously in complex systems, and delivering actionable business insights.

1 THE PROBLEM

40+ hrs

wasted weekly on manual portal tasks across TMS, carriers, and retailers

12%

average freight overpayment from unaudited invoices and rate discrepancies

Broken

Traditional automation fails on MFA, CAPTCHAs, credentials, and UI changes

2 THE SOLUTION: AI TEAMMATE, NOT JUST AUTOMATION

01 COMMUNICATE

Responds in Slack and Teams like a colleague. Ask "What's the status on Load #8847?" and get an instant answer.

02 LEARN

Upload routing guides, carrier preferences, and approval rules. Ventus learns your SOPs and follows them.

03 OPERATE

Works autonomously in SAP, Oracle, MercuryGate, and carrier portals—quoting, scheduling, auditing, tracking.

04 DELIVER

Surfaces cost leakage, rate trends, and OTIF risks—giving leadership data to optimize operations.

KEY DIFFERENTIATOR

Browser-native agents operate directly in your existing systems—handling MFA, CAPTCHAs, and complex credentials that break traditional automation. No APIs required. Deploy in days, not months.

3 PLATFORM CAPABILITIES

Freight Quoting & Rate Shopping

Multi-carrier rate comparison across TL, LTL, intermodal. Spot vs contract analysis. Auto-populate quotes in TMS.

Invoice Audit & AP Automation

Validate carrier invoices against rate confirmations. Catch accessorial overcharges. Auto-match BOL, POD, invoice.

Appointment Scheduling

Book dock appointments at Amazon, Walmart, Target, Costco. Avoid OTIF penalties. Auto-reschedule on delays.

Track & Trace Automation

Real-time container tracking. ETA updates to customers. Exception alerts for delays, detention, demurrage.

Load Building & Dispatch

Consolidate shipments. Optimize routes and modes. Update load status in TMS. Carrier assignment automation.

Document Management

Auto-retrieve PODs from carrier portals. Extract data from BOLs, rate cons. Upload to TMS and customer portals.

4 PROVEN CUSTOMER RESULTS

INTEK LOGISTICS

150 invoices in 3 min

Previously took 10+ hours

HYPERLUX LOGISTICS

Full load-to-bill

Email to TMS to invoice automated

CANAAN XPRESS

90% reduction

In manual container tracking calls

CAPACITY LLC

Automated routing

Item-mastering across WMS/TMS

“*Ventus AI's solution turned a tedious 10-hour invoicing slog into a 3-minute automated process. To me, it's magic.*”
