

Made4net Unveils SCEXpert Upgrade: Next-Generation Supply Chain Execution Software Built for Modern Enterprise Demands at Manifest 2026

Advanced mobile technology, intuitive reporting, and AI-powered intelligence define the latest release

Made4net, a global leader in [WMS \(warehouse management system\)](#) and supply chain execution software, proudly announces the latest release of SCEXpert, a supply chain execution platform including a best-of-breed WMS with integrated yard management, dynamic route management, labor management, proof of delivery and warehouse automation solutions that deliver a true supply chain convergence. The major software update includes a complete UI modernization and four key innovations designed to boost agility and performance.

#1 Mobile-First Architecture for Tomorrow's Workforce

A completely reimagined mobile application built on modern React technology and integrated with Made4net's dynamic screen generator platform. This architectural foundation enables rapid feature deployment and workflow customization across diverse industries and client requirements.

The new mobile experience delivers responsive design that maintains visual consistency across all screen sizes and devices, with full cross-platform support for iOS, Android, Windows, and Linux operating systems. Enhanced usability features include dark/light mode options, integrated scanner and camera functionality, and Progressive Web App (PWA) support—all designed to minimize errors and streamline warehouse operations.

#2 Empowering Users with Self-Service Reporting

The newest version of SCEXpert introduces an integrated Report Designer that puts powerful business intelligence directly into users' hands. The intuitive drag-and-drop interface enables customers to create visually rich reports without technical assistance, while real-time preview capabilities ensure accuracy before deployment.

The Report Designer supports flexible export options to PDF, Excel, Word, HTML, and other formats, with customizable themes and multi-language localization. Seamless connectivity to SCEXpert's reporting engine ensures data integrity while maintaining compatibility with future platform versions.

#3 Unified Email Communications

The new Made4net Email Gateway establishes a centralized communication hub for all system-generated messages, alerts, and notifications. Supporting major providers including AWS SES, Microsoft 365 Graph API, SendGrid, and custom SMTP configurations, the gateway

simplifies email management while ensuring secure authentication through full integration with Made4net's Identity Access Management system.

#4 AI-Powered Operational Intelligence

Perhaps most transformative is the introduction of an AI-powered chatbot interface that enables natural language interaction with the WMS. Users can now ask questions like "Why do I have this exception?" and receive contextual, data-driven explanations with recommended actions—reducing dependency on specialized personnel and accelerating decision-making.

Future enhancements will expand AI capabilities to include automated exceptions handling, integrated training and SOP automation, and predictive analytics.

"Our new release of SCExpert marks a fundamental shift in how warehouse teams interact with their WMS," said Amit Lev, Made4net's EVP of Sales and Strategy. "By combining mobile-first architecture with AI-powered intelligence and self-service reporting, we're eliminating traditional barriers between workers and the data they need to make better decisions in real time."

About Made4net

Made4net is a global leader in WMS and supply chain execution software. Made4net's end-to-end SCExpert™ platform offers a robust WMS solution that enables real-time inventory visibility, labor management, and equipment productivity with performance analytics that drive faster, more accurate order fulfillment and improved supply chain efficiency.
